## SUMMARY

Software engineer with strong technical knowledge in distributed systems focusing into designing, developing and maintaining system architectures able to serve millions of concurrent requests. Experienced also in big data processing, DevOps and SRE methodologies with focus on automation, load testing, disaster recovery, system resiliency and availability.

## WORK EXPERIENCE

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| PRESENT<br>NOVEMBER 2018       | <p>Lead Engineer / Cloud Architect at <b>Vimond Media Solution AS</b>, Bergen, Norway</p> <p>Leading the development of user-facing APIs and data platforms for large-scale OTT services, while driving cloud architecture and platform modernization initiatives.</p> <p>I contributed to the company by:</p> <ul style="list-style-type: none"><li>• designing and evolving distributed backend systems ensuring scalability, high availability, and consistent QoS under heavy load</li><li>• defining and driving AWS cloud architecture with focus on cost-efficiency, performance, and security</li><li>• mentoring engineers and driving best practices in system design, testing, observability, and operational excellence</li></ul> <p>KEY ACHIEVEMENTS:</p> <ul style="list-style-type: none"><li>• reduced cold start latency of Spring Boot microservices through warm-up strategies and GraalVM adoption</li><li>• re-architected image delivery pipeline to a serverless solution (AWS Lambda, S3, CloudFront), improving scalability and reducing costs</li><li>• built a large-scale analytics platform (S3 data lake, AWS Glue/Spark, QuickSight) for user behavior insights</li><li>• designed a search abstraction layer on Elasticsearch with custom DSL and optimized index design for diverse search use cases</li></ul> |
| NOVEMBER 2018<br>NOVEMBER 2015 | <p>Software engineer at <b>Vimond Media Solution AS</b>, Bergen, Norway</p> <p>As a software engineer at Vimond I contributed in the following initiatives:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

- participated in the developing of an internal load test framework based on Jmeter, Consul and AWS services simulating the traffic of 2M+ concurrent users
- joined the core team that designed and developed a new cloud native content delivery module of the Vimond platform. The new system put the foundations for Vimond migration towards a cloud native, highly available and cost efficient platform. The project resulted in the launch of the sport streaming service Kayo Sports (<https://kayosports.com.au>), one of the most successful Vimond customers in the APAC region.

## TECHNICAL SKILLS

|                         |                                                                               |
|-------------------------|-------------------------------------------------------------------------------|
| CORE:                   | Distributed systems, system design, SRE, scalability resiliency, load testing |
| LANGUAGES:              | Java, TypeScript/Node.js, Go (basic), Python (basic)                          |
| CLOUD & INFRASTRUCTURE: | AWS, Terraform, Kubernetes, Karpenter, Docker                                 |
| DATA & STREAMING:       | Kafka, Elasticsearch, Redis, Spark, NATS, Debezium                            |
| DATABASES:              | PostgreSQL, Oracle, DynamoDB, Cassandra                                       |
| OBSERVABILITY:          | Datadog, New Relic, Prometheus, Grafana                                       |
| LOAD TESTING:           | K6, Jmeter                                                                    |

## SPEAKING ENGAGEMENTS

|           |                                                                                                                                                           |
